1. EXECUTIVE SUMMARY

The Department of Health (DH) with Community Health Partnership (CHP) has commissioned this study from the Community Hospitals Association (CHA) to provide a profile of community hospitals in England in 1998 and 2008, demonstrating changes over the 10 year period and make suggestions for achieving regular and routine profiling of community hospitals.

Context

The context of the study is the increasing diversification of community services with the implementation of the national policy of care closer to home. The profile of community hospital services has been raised, as local hospitals are recognised as having an important part to play in providing integrated health and social care services to defined populations and helping to create increased capacity for health and care within local areas. Investments are being made in new and redeveloped facilities and new partnerships are being forged. With this has come flexibility in the definition of community hospitals and therefore identification and tracking of "community hospital." This study considers new classifications of community hospital type services and considers future data capture requirements.

Method

The method adopted for classifying current community hospitals was a desk top exercise to take a snapshot of 1998 and 2008, using existing databases and networks. A new classification for community hospitals was adopted for the study. The first three classifications were designed and formally recognised by the CHA at its AGM in 2007. The fourth classification was added at the start of this study and ratified at the CHA AGM 2008.

Classifications of Community Hospital

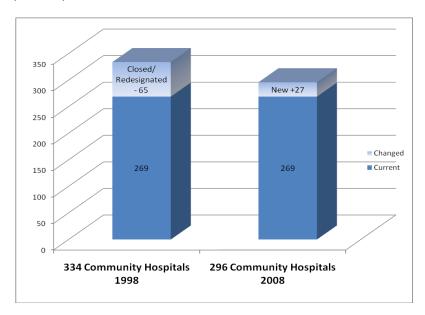

- **A.** A Community Hospital 'A local hospital, unit or centre community based, providing an appropriate range and format of accessible health care facilities and resources. These will include inpatient beds and may include outpatients, diagnostics, surgery, day care, nurse led, maternity, primary care and outreach services for patients provided by multidisciplinary teams.'
- **B.** Community Care Resource Centre A local clinic, diagnostic centre, or ex-community hospital providing an appropriate range and format of accessible health care facilities and resources. These do not include inpatient beds but, may include outpatients, diagnostics, treatments, day care, primary care and outreach services for patients provided by multidisciplinary teams.'
- **C. Community Care Home** Local care home with NHS commissioned services such as an inpatient facility for older people offering intermediate and respite care and associated services.
- **D.** Intermediate Care/Rehabilitation Unit A local facility providing beds and associated clinics and therapy in order to promote independence, avoid admission to a DGH (step up) and reduce stays in a DGH (step down).

The source of data for the study were 6 databases:- NHS Choices, NHS Estates (ERIC), Wellcome Trust and National Archive, NHSI and CHA 1998 and 2008. In addition, verification was carried out through internet searches and direct contact with staff in community hospitals and PCTs through telephone calls. A CHA Steering Group of 5 members has carried out this study. A total of 361 community hospitals were identified and tracked for this study, including current, new, re-designated and closed hospitals. The total number of facilities listed on the database that was checked was 407, of which 46 were assessed as not meeting the criteria for a classic community hospital and were either reclassified or excluded accordingly.

HT/BM/CHA/CHP/160608

Community Hospitals (Category A)

The number of "classic" community hospitals – that is local community hospitals with inpatient facilities has reduced from 334 to 296, representing an overall loss of 38 community hospitals with beds over the past ten years.

A total of 65 community hospitals have closed either permanently or for potential redevelopment (39) or have been re-designated (26). 18 of the closed community hospitals have been replaced with 13 new community hospitals, with 4 of the new hospitals combining the facilities of 2 or 3 existing community hospitals. 27 new community hospitals have been recorded, of which 13 are new builds and 14 are re-modelled from existing hospitals such as DGHs.

| A. Community Hospitals | Number |
|---|--------|
| Community Hospitals 1998 | 334 |
| Closed / Re-designated alternative facilities | -65 |
| New/ Re-designated as community hospitals | 27 |
| Community Hospitals 2008 | 296 |

The South West SHA has over a quarter of the 296 currently recorded classic community hospitals, with a recorded 80 community hospitals. Nearly half of the community hospitals in England (49%) are in the South of the country –namely the South West, South East and South Central SHAs. 6 out of 10 (61%) community hospitals in England are either in the South or East of England.

| Strategic Health Authority | Number of Community Hospitals (A) | % of National (rounded %) |
|----------------------------|---|----------------------------|
| South West SHA | 80 | 27% |
| East of England SHA | 35 | 12% |
| South Central SHA | 34 | 11% |
| South East Coast SHA | 34 | 11% |
| East Midlands SHA | 29 | 10% |
| North West SHA | 22 | 7% |
| West Midlands SHA | 22 | 7% |
| Yorkshire & The Humber SHA | 18 | 6% |
| North East SHA | 17 | 6% |
| London SHA | 5 | 2% |
| Total | 296 | 100% |

Community Hospital-Type Facilities – (Classifications B,C,D)

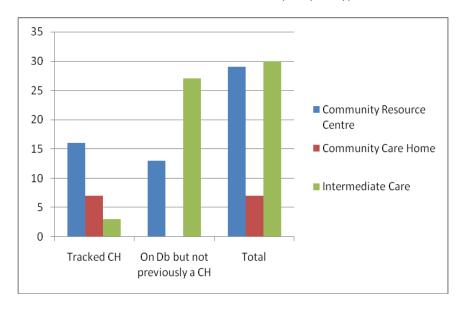

The 3 additional classifications reflect the increasing diversification of community hospital facilities. The figures relate to known community hospitals that have been tracked. These hospitals have changed their function and been re-designated, and do not include existing or new facilities that may be classified in this way.

| Category | Community Hospitals (A) that have been re- designated since 1998 | Number |
|----------|---|--------|
| В | Community Resource Centre | 16 |
| С | Community Care Home | 7 |
| D | Intermediate Care / Rehabilitation | 3 |
| | Total | 26 |

16 community hospitals no longer have inpatient beds, and they are therefore categorised as Community Resource Centres. 7 community hospitals have become registered and regulated as care homes, and 3 have specialised as intermediate care facilities. The above figures record the redesignation of community hospitals known in 1998 only.

Other Community Hospital Type Facilities – Classifications, Developments and Exclusions

In order to present a wider context, in addition to the 26 "tracked" community hospitals from 1998, we have also included 40 facilities from the database of 407 facilities that are judged to fulfil the criteria for the three classifications to illustrate the increasing diversification of community hospital type services. These are not an exhaustive list of community hospital type services.

We have listed 54 example schemes in development which are a mix of classic community hospitals and other community hospital type facilities funded either through the Community Hospital Fund, the LIFT programme or other capital sources. 20 examples of facilities from the database and searches that have been excluded from the analysis and classification are also given, with the main reasons for their exclusion being that they are specialist facilities.

Discussion on Findings

There has been an overall loss of classic community hospitals with beds and an increase in diversification of local community facilities. Re-designated "tracked" community hospitals have become mainly Community Care Resource Centres, as they develop ambulatory care services and no longer have beds. A number have focused purely on intermediate care and rehabilitation and a few have partnered with care homes.

We have assessed the emerging characteristic of each of the classifications in respect of services, facilities and client group being catered for. Whilst community hospitals and community care resource centres cater for all ages, the community care home and intermediate care units focus predominantly on older people. We have also considered the partnerships that are predominant with each of the classifications which may include Local Authority, Social Services, GPs, and third sector.

Data Capture

The CHA has suggested 9 areas for future data capture. These recognise the fact that community hospitals are multi-provider units, with multiple commissioning arrangements, an increasing variety of ownership and management arrangements, and a wide network of partnerships and associated services and facilities. From this data it would be possible to differentiate community facilities according to the 4 classifications of community hospital-type facilities. The main areas for data capture include pathways of care, services, facilities, providers, commissioners, associated services and contracts.

| INFORMATION | DETAILS |
|-----------------------------|--|
| Identification | Name & Town - Address, telephone, email & web |
| Contact | Organisation Owning & Managing Facility Regulatory Authority |
| Pathway of Care | Intermediate care, palliative care etc Client group – whole community / older people etc. |
| Services | Clinics, beds, diagnostics, day surgery etc. |
| Facilities | Community teams base, Wellness centre, Cafe, Nursery etc |
| Providers | PCT, NHS Hospital Trust, Social Services, Voluntary agencies, private practitioners etc |
| Commissioners | PCT, Practice-based commissioners, Local Authority, private patients etc. |
| Associated Services on site | Care home, Day care, GP practice, Hospice etc. |
| Contracts | Leased space/ sessional rental/contracted services Direct provision or Hosted Service |

Recommendations

We have made five recommendations, the first of which concerns the further validation and interpretation of the findings with managers within the NHS. The next stage is to further test and develop the findings from this initial study with Strategic Health Authorities (SHAs) community hospital leads working with Primary Care Trusts (PCTs).

This study has focused on identifying and counting the classifications of community hospital type services, and has not undertaken an analysis of changes in service configuration within each hospital. We suggest an analysis of the changes to local community hospital services, and an ongoing review to reflect the dynamic situation.

Conclusion

334 classic community hospitals were recorded in 1998 and in 2008 this is now 296. Over the ten years, 65 of these have changed. 39 community hospitals have closed, of which 18 have closed for redevelopment. 27 new or replacement community hospitals have been recorded, and there are further new developments pending. 26 of these have been developed as care homes, intermediate care services or resource centres without beds.

In addition to tracking and classifying known community hospitals from 1998, we have also listed other facilities that may be classified in this way in order to test the classifications and to illustrate the diversification of community based primary and community care facilities. Very many more facilities are being created within communities, such as extended clinics, GP surgeries or care homes. Developments are being styled in a number of ways including as primary care centres, community care centres, health villages, integrated health and social care centres, and wellness centres. This is a dynamic situation, as new pathways, partnerships and services are being explored. We continue to assess the national situation through our networks and national sources.

We believe that the 4 dimension classification system is helpful in identifying the variation in community hospital type services for this snap shot exercise. It will need to be reviewed regularly and developed to reflect the extending range of service models. As the implementation of "Care Closer to Home" continues, we are witnessing increasing diversity in how capacity is created within primary, community and social care services, and where community hospitals have a role to play in providing a focus for integrated services. Studies on measuring capacity, performance and productivity are already part of the wider programme for Community Hospitals nationally.

This study has focused on identifying and counting the classifications of community hospital type services, and has not undertaken an analysis of changes in service configuration within each hospital. We suggest an analysis of the changes to local community hospital services, and an ongoing review given such a dynamic situation where the level of change is unprecedented in the 100 year history of community hospitals in England.

We hope that this study is a helpful step in identifying the number and range of community hospital type services, and provides a basis for designing a system to capture this information regularly and routinely.

2. BRIEF

The Community Hospitals Association (CHA) was invited by the Department of Health and Community Health Partnerships to undertake a commission in order to profile community hospitals in England from 1998 to date.

The brief agreed in January 2008 was for the CHA to produce:

- A profile of community hospitals in England in 1998 and 2008, demonstrating changes over the 10 year period
- Suggestions for achieving regular and routine profiling of community hospitals

The scope of this project is to identify and classify community hospitals and is therefore focused on buildings and facilities at this stage. The scope is also to suggest appropriate data for ongoing recording to enable future work on capturing data on services. This project therefore represents the first stage in a wider process that will eventually incorporate systems for recording services and activity in community hospitals.

The CHA has been mindful of the future application of the data to be collected, which is to identify and monitor services and facilities in community hospital services, and track changes. In the longer term this will enable an assessment of the role of the community hospital in creating capacity to enable the shift of services from acute to primary and community care in respect of national policy "care closer to home."

The commission has been led by Helen Tucker and Barbara Moore working with CHA Steering Group members Jan Marriott, Trish Jay and Suzanne Jones. The Department of Health Steering Group consisted of John Pope, David Gilbert and Graham Spence (Appendix A). The commission was undertaken from January 2008-May 2008.

This study is part of a wider programme for community hospital development, as coordinated by the Community Hospital Programme Board.

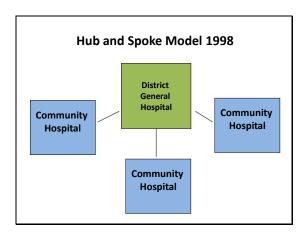

HT/BM/CHA/CHP/160608

3. CONTEXT

There are challenges to compiling a comprehensive list of all community hospital services in England. Although the Department of Health holds data on all NHS hospitals and has access to data on independent hospitals where NHS services are commissioned, it is not clear which of the hospitals and facilities are currently categorised as community hospitals. Therefore there is a need to agree a definition that covers community hospital services.

A previous study by the CHA showed that by the turn of the century there were 471 community hospitals in the UK, of which 322 were in England. The survey results showed that there were more than 18,500 beds, of which 8,500 were GP-led beds, and that 20% of the GP workforce had admitting rights to GP beds. The study concluded that the association of such hospitals with their local communities, the extent of primary care involvement and the range of services indicated that these hospitals should have a significant role in the evolution of intermediate care and in alleviating the pressures on larger specialist hospitals.

For one hundred years, cottage and community hospitals have been viewed as local hospitals with beds that serve a defined population. The hospitals, in the past referred to as "GP hospitals," would typically include services such as minor injuries departments and clinics, and some would have day hospitals for older people, maternity units, and operating theatres. Almost all would have been within the NHS. A typical description of the health service model would have been "hub and spoke," whereby a District General Hospital would be ringed by a network of community hospitals.

With the implementation of the Departments aim of shifting care closer to home, the variety of community hospital services has expanded. The definition has recently widened to include polyclinics, primary care centres and health villages with care homes. As the diversity of community hospital services models emerge, so the definitions and categorisations need to be reviewed to accommodate the variations and hybrid models. However, not all facilities outside of a DGH would be classified as a community hospital type service, and these include specialist facilities, hospices, GP practices providing core services, and specialist local disability and mental health centres. Also excluded are private and independent hospitals that provide specialist private hospital services.

¹ Seamark D, Moore B, Tucker H, Church J & Seamark C (2001) Community hospitals for the new millennium. *British Journal of General Practice* **51** (463) 125–7.

The context of this study is diversification: - in pathways of care, ownership and management arrangements, provision of services, commissioning, and design. The traditional model of a small local hospital in a rural setting with local GPs providing medical support for services including beds, clinics and minor injuries units is changing for many communities in a way which is unprecedented in the community hospitals 100 year history.

Community hospital services can incorporate a wide range of care models within one local facility, including intermediate care and rehabilitation; acute and sub-acute care; palliative and terminal care; unscheduled care and elective surgery; maternity; mental health; social care and health promotion. These local hospitals are typically styled as catering for the whole community, although recognising that the predominant client group is older people. Community hospital services are presented as integrated services that provide an extension to primary and community care, particularly for people who live in remote, rural and coastal areas.

There is a diversification in the ownership and management of community hospitals. Although the majority are owned and managed by PCTs, alternatives include NHS Hospital Trust, Foundation Trust, Social Enterprise, Charity or independent company. The increase in arrangements with LIFT and community ventures is expanding the options for owning, developing and managing the service. There is an increasing diversification of location of community hospitals. Traditionally community hospitals would be located within positions such as in central market towns. Now community hospitals are being developed in urban areas, with a number being located in places such as business parks and high streets.

Community hospital services may best be described as multi-provider units, providing an environment for a range of providers across health, social care and the third sector. The way that information about services and activity is collected for each hospital will depend on whether each community hospital is viewed as a business unit in its own right, or whether these hospitals are viewed as environments in which a range of provider services take place. The service and contractual information is held by the provider organisation that is hosted by the community hospital. Ways of capturing service and activity information have been considered. It is acknowledged that an integral, routine and regular data collection system is needed if changes and effectiveness are to be monitored on an ongoing basis.

With the policy commitment to investing in and developing community hospital services, there is a need to differentiate various types of services. The policy of care closer to home is concerned with the shift of appropriate services from acute hospitals to community services including community hospitals, and progress with this shift will need to be monitored. Therefore, there is considerable attention on community hospitals, their numbers, capacity, productivity and contribution to the national agenda.

The White Paper "Our health, our care, our say: a new direction for community services" set out the Government policy for achieving a new generation of community hospitals. The policy for care closer to home was set out, with community hospital services playing a key role in creating capacity for

integrated health and social care in local areas. The policy drew attention to the potential for up to 50% of outpatient appointments could take place in a community setting² The potential to replace acute bed days through better use of intermediate care beds, either 'step down', facilitating early discharge, or 'step up', admission prevention.³ The White Paper urged NHS organisations to explore new pathways, new partnerships and new ownership possibilities for community hospitals

The White Paper built on the guidance "Keeping the NHS Local" which proposed sustainable solutions for smaller hospitals to secure their valued role at the heart of local communities." "It is an exciting time for smaller hospitals as their traditional roles are developing and changing as they can provide a more integrated range of modern services at the heart of the local community." The guidance contains three key principles - working with people not for them, focusing on redesign not relocate, and also taking a whole systems view. ⁴.

The announcement the investment of £750 million in community hospitals over a five year programme was set out in "Our health, our care, our say; Investing in community hospital services⁵." In this, Lord Warner stated that "Hospitals and services that are grounded in local communities that are fostered by local partnerships and that support independence and wellbeing will enable commissioners to realign and re-design care from the point of view of the patient. They are not a relic of the past but a key part of the future."

Lord Darzi is currently undertaking a review of health and health care in England, and in his interim report he has drawn out four over-arching themes for the NHS over the next ten years: fairness, personalisation, innovation and safety. He has focused on patient benefit and improved outcomes. Community hospitals are often featured as providing a personal, local, accessible services that local people choose. Benefits have been identified in national studies, particularly in outcomes for rehabilitation for older people⁶. The improved outcomes in levels of independence in post acute care for older people in community hospitals as compared with Acute General Hospitals has been demonstrated in studies in Bradford⁷. This is emphasized in the White Paper, "Of the 11 leading causes of hospital bed-use in the UK, 8 are due to illnesses or conditions for which greater use of community facilities could lead to fewer patients needing to be in hospital or to be there for as long." "Evidence shows that there are a number of benefits of community hospitals, one of which is that they provide better recuperative care than District General Hospitals (DGHs)." There is also evidence of improved patient satisfaction⁸.

The Department of Health Community Hospitals Programme Board is coordinating a number of national initiatives including "The Productive Community Hospital" managed by the NHS Institute of Innovation and Improvement; a new Health Building Note HBN 11-01 for Primary Care and Community Facilities. The Care Services Improvement Partnership provides a web-based resource on community hospitals which was developed in partnership by the Department of Health, Association of Social Services Directors, Community Hospitals Association, Leagues of Friends and University of Warwick⁹. Innovations and Best Practice in Community Hospitals and Primary care facilities are being promoted through national awards such as through the CHA and through Community Health Partnerships for LIFT schemes.

Funding for community hospital developments is being awarded through the Community Hospitals Fund and LIFT schemes (Appendix F). The list shows the increasing diversity of facilities that have been classified as community hospital type services.

The DH has issued "Putting People First" which describes an aim that "Ultimately, every locality should seek to have a single community based support system focused on the health and wellbeing of the local population, binding together local Government, primary care, community based health provision, public health, social care and the wider issues of housing, employment, benefits advice and education/training." ¹⁰

Community hospitals have an important role in transforming whole health and social care systems into local, accessible, integrated and person-centred services¹¹.

Community Hospitals provide this focus for many communities and are well placed to contribute to the health and wellbeing of local populations.

4. METHODOLOGY

This study was undertaken as a desk-top exercise in order to produce a validated list of current community hospitals in England. The CHA applied its experience, networks and knowledge from its 40 years in existence in order to provide a comprehensive list of facilities that may be deemed as community hospitals. The study has provided a comparison of known community hospitals in December 1998 with a snapshot of community hospitals in March 2008.

The steps taken to carry out this study were:

- Agree a working definition and parameters for community hospitals
- Agree the databases to be accessed for compiling and checking a list of community hospitals
- Carry out the validation on databases and compile lists for 1998 and 2008
- Utilise supplementary searches and direct contact for further checks
- Cross check lists with CHA Steering Group and modify
- Finalise lists
- Analyse and interpret the findings

Briefing papers on definitions and detailed methodology were prepared by the CHA and agreed within the steering group, and these formed the framework for this study.

Definition and Parameters

In order to undertake this commission, a working definition of a community hospital was agreed by the DH Steering Group, following a discussion based on a briefing paper prepared by the CHA. The definition and descriptions adopted in the White Paper, "Our Health Our Care Our Say¹²" and from other national studies were used as a guide for the adoption of a classification system.

"A service which offers integrated health and social care and is supported by community based professionals who have direct access to its services." ¹³

"A local hospital that will include inpatient services and may include outpatients, diagnostic, day care, primary care and outreach services. Medical care is normally led by GPs." ¹⁴

The description of a community hospital was developed by the national steering group for the Care Services Improvement Partnership.

"A modern community hospital service aims to provide an integrated health and social care resource for the local population to which it belongs. These local facilities develop as a result of agreements between local people, service providers and the NHS. Community Hospitals are an effective extension to primary care with medical support provided largely by GPs. The health and social care provided may include medical care, rehabilitation, palliative care, intermediate care, mental health, maternity, surgical care and emergency care. Community Hospital care is characterised by care pathways that make the most of local sources of support. The community hospital provides a focus for local community networks." 15

The CHA has used the three classifications adopted at the Annual General Meeting of the CHA in 2007. These 3 classifications reflected changing models. To the 3 classifications, a 4th was added

¹² DH 2006 Our Health Our Care Our Say

^{13&}lt;sub>13</sub> Professor Geoff Meads "Participate" University of Warwick 2004

¹⁴ Extracted from Definition by Professor Lewis Ritchie, "Promoting Progress" University of Aberdeen

¹⁵ Meads & Tucker with CSIP Reference Group 2005

during this study to reflect the change in focus of a number of community hospitals. The 4th classification has now been adopted at the AGM 2008.

Classifications of Community Hospital

- **A.** A Community Hospital 'A local hospital, unit or centre community based, providing an appropriate range and format of accessible health care facilities and resources. These will include inpatient beds and may include outpatients, diagnostics, surgery, day care, nurse led, maternity, primary care and outreach services for patients provided by multidisciplinary teams.'
- **B.** Community Care Resource Centre A local clinic, diagnostic centre, or ex-community hospital providing an appropriate range and format of accessible health care facilities and resources. These do not include inpatient beds but, may include outpatients, diagnostics, treatments, day care, primary care and outreach services for patients provided by multidisciplinary teams.'
- **C. Community Care Home** Local care home with NHS commissioned services such as an inpatient facility for older people offering intermediate and respite care and associated services.
- **D.** Intermediate Care/Rehabilitation Unit A local facility providing beds and associated clinics and therapy in order to promote independence, avoid admission to a DGH (step up) and reduce stays in a DGH (step down).

The CHA has used these 4 classifications as a working definition of community hospitals to guide this process with an explicit rationale that would reflect the current approach to community hospital services. It was agreed that there was a need to be pragmatic about which hospitals, services and facilities were included in the profiling, and transparent about the reasoning. This approach was agreed in the context of the increasing diversification of local community services and facilities.

Classification A is a "classic" Community Hospital, which is a local hospital with beds staffed by primary and community staff. The classification includes small hospitals (such as those with around 20 beds) and large hospitals (such as re-modelled DGH with over 50 beds). These hospitals are described in some cases as primary care hospitals, neighbourhood hospitals or local hospitals.

Classification B is a Community Care Resource Centre, which is essentially an ambulatory care centre offering services such as clinics and diagnostic facilities and may combine primary care with GP practices as well as community services and outreach acute services. These centres may be styled as primary care centres or polyclinics.

Classification C is defined as a Community Care Home development of a community hospital, providing a range of health and social care within a facility that may be styled as an integrated care centre, health and social care campus or health village.

Classification D is an Intermediate Care and Rehabilitation Unit, formally a community hospital, that is now focusing on through services such as beds for "step up and step down" care, day care and clinics supported by a multidisciplinary team of health and social care staff.

Scoping

The study is concerned with tracking NHS and Independent community hospitals from December 1998 to March 2008. This excludes community hospitals that were closed before 1998, and excludes community hospitals in development that have not yet opened. The study seeks to identify and count community hospital services, but not changes in services and facilities nor changes in the way that they provide services. Not all community-based services outside of a DGH are included in the categorisations of community hospital type services. Excluded are specialist units, hospices, GP surgeries providing core services, Diagnostic and Treatment Centres and independent hospitals providing specialist services.

With respect to the scope of the work on data capture, this was also carried out as a desk top exercise based on the knowledge and experience of the CHA steering group and the learning from this study. Key principles for the data capture were discussed with senior managers of PCTs and community hospital matrons. It was outside the scope of this exercise to assess and consider the current data capture systems, or attempt any alignment with current systems. It was also outside the scope of this study to consider how the data may be collected.

Databases

The following databases provided the source data and the basis for validation.

Databases

- **1. CHA databases 1998** This is used primarily for membership data such as subscriptions, and has been designed as an administrative tool. The CHA directory of data from 1998 was published in 1999.
- **2. CHA database 2008**. The CHA issues regular update requests from all community hospitals, and the most recent survey in 2006 had a response from two thirds of all hospitals. The web-based CHA directory is continually updated.
- **3. NHSI for Innovation and Improvement Database**. This database was produced with support from CHKS and the CHA, and was compiled from the results of an online survey. This was further validated and updated by the DH.
- **4. Wellcome and National Archive**. This database provides a historic record of hospitals, with details such as founding date and administrative arrangements.
- **5. NHS Choices** This database lists all hospitals in England, and provides details of outpatient activity. It is a database designed to support "choose and book." It is an interactive site, inviting patients and the public to register their comments about the service.
- **6. ERIC** The Department of Health Estates Department lists all capital assets within the NHS, defined by classifications such as community hospitals, multi-use facilities and support services.

The 1998 CHA database provided the baseline for checking and tracking community hospitals over the past 10 years. There were 322 community hospitals listed in the CHA Directory published with 1998 data, and to this was added a further 12 hospitals that were in existence in 1998 but were not part of the CHA records. Therefore the baseline was 334 community hospitals.

The method for identifying and tracking each community hospital was to check each facility on the baseline list of facilities (CHA 1998) against the remaining 5 databases.

A spreadsheet was created with a column for each database, and each community hospital was checked against each database. When a facility was identified from the 5 databases that was not in the baseline list, it was added and checked. A final column was added to the spreadsheet for recording the outcome of searches, which were carried out to answer queries or provide validation. The searches included internet searches, contact with PCTs and contact with community hospital staff through members and known networks.

The unique identifier for each hospital was to be the ERIC capital estates code, but this was not available for all hospitals and could not be validated within the period for the study. Therefore an alternative and temporary coding system was used, based on the first two letters of the community hospital, an abbreviation of the SHA, followed by sequential numbering.

A total of 361 hospitals have been tracked, 334 which were open in 1998 and 27 community hospitals which have been added since. A full list with current status is provided in Appendix B.

| Community Hospitals | Number |
|-------------------------|--------|
| Open in 1998 | 334 |
| New Community Hospitals | 27 |
| Total | 361 |

The validation against existing databases provided a method for identifying and checking community hospitals, and evidencing sources from databases, plus additional checks using the internet or direct contact, enabled findings to be triangulated.

| Database | Number |
|--------------------------------|--------|
| CHA 1998 - baseline | 322 |
| Added to baseline | 12 |
| Additions from other databases | 73 |
| Total | 407 |

Therefore there were 407 entries included from the combined database that were checked against the baseline. This required a total of 2,442 checks of 407 entries in 6 databases.

| Community Hospitals on Database | Number |
|---------------------------------|--------|
| Tracked Classic CH (A) | 295 |
| New CH (A) | 27 |
| Not Classic CH (B,C & D) | 40 |
| Closed (permanent or redevelop) | 39 |
| Duplicates/Excluded | 6 |
| Total on Database | 407 |

The 407 facilities that were described as Community Hospitals were therefore reviewed and classified.

| Classification | Tracked CH | New CH | Closed CH | On Db but not previously a CH | Total |
|----------------------------|------------|--------|--------------|-------------------------------|-------|
| Classic Community Hospital | 269 | 27 | 39 | | 335 |
| Community Resource Centre | 16 | | | 13 | 29 |
| Community Care Home | 7 | | | | 7 |
| Intermediate Care | 3 | | | 27 | 30 |
| Excluded | | | | 2 | 2 |
| Duplicates | | | | 4 | 4 |
| Total | 295 | 27 | 39 | 46 | 407 |

Discussion on Databases

There were limitations with each of the databases, but in combination they helped to provide an evidence base for tracking community hospitals. For instance, the ERIC data base was created in order to identify capital estates. There were records of capital buildings where the hospitals were known to be closed, but the estate was still registered to the NHS still in NHS ownership. Independent hospitals did not have an NHS estate code and therefore it did not apply to all hospitals. The NHS Choices website was the most recent database and was created for "choose and book." Many of the community hospitals were not listed as "hospitals", but were recorded as "other sites." Some community hospitals were recorded as part of NHS Hospital Trust facilities as well as PCT commissioned and owned facilities. The Wellcome Trust and National Archive website was used as a historical reference point, in order to try and make sure that the baseline list of community hospitals was as complete as possible. The NHSI database on the website relied on electronic entries by hospital staff. The version used was the database developed from the NHSI list which was validated by the DH and developed to include Community Hospital Fund (CHF) applicants. The CHA 1998 database was used as the base line (with some additions) and the latest CHA database used as a final check once all other databases had been utilised. The CHA databases have been developed from information from members and others as a result of questionnaires that are sent out regularly. This is supplemented by networking and regular contacts.

| Databases | Number Identified in Database | % of Total of 407 CH Identified |
|-------------|----------------------------------|---------------------------------------|
| CHA 1998 | 322 | 79% |
| CHA 2008 | 298 | 73% |
| NHSII | 297 | 73% |
| Wellcome | 175 | 43% |
| NHS Choices | 311 | 76% |
| ERIC | 334 | 82% |

The database that yielded the most validate entries was the NHS Estates database, ERIC. This may have been because it included existing, closed and new hospitals of each category. The CHA database for 1998 identified 322 hospitals at the time. The current CHA database records 298 community hospitals. The Wellcome database was used to check for any additional hospitals from archive records that may not have been identified in 1998.

The method adopted enabled us to build on the work that had already been carried out by the Department of Health and the NHSI, by using a structured process that was transparent. The method also enabled us to use our knowledge of community hospitals nationally through our networks and membership.

Additional Facilities

During the searches, additional facilities were identified, and these were predominantly intermediate care and rehabilitation units. Whilst this was not an exhaustive search, it did help to illustrate the increasing range of services. It was noted that facilities involving Health and Social Services were not always located on the 6 NHS databases we were checking, as they were predominantly social care facilities. These 28 facilities that were the result of additional searches brought the number of facilities checked or searched up to 435. The number includes facilities with two entries if they were closed and then replaced.

| Facilities | Number |
|---|--------|
| Classic CH - Tracked, current, new & closed | 361 |
| On Db but not previously a CH | 46 |
| Additional from searches (B,C & D) | 28 |
| Total | 435 |

Facilities were then classified accordingly, and those not deemed to meet the criteria for any of the 4 classifications were listed as excluded. These included specialist facilities such as for mental health services, or satellites acute hospital services. Duplications occurred when facilities had undergone name changes during the ten year period, or hospitals had similar names.

| Classification | Database | Additional from searches | Total |
|----------------------------|----------|--------------------------|-------|
| Classic Community Hospital | 335 | | 335 |
| Community Resource Centre | 29 | | 29 |
| Community Care Home | 7 | 2 | 9 |
| Intermediate Care | 30 | 8 | 38 |
| Excluded | 2 | 18 | 20 |
| Duplicates | 4 | | 4 |
| Total | 407 | 28 | 435 |

Therefore 407 entries were validated against all databases with a further 28 facilities were added during the searches, bringing the total to 435.

Lists of Community Hospitals and Community Hospital Type Services

A list of the 361 "tracked" community hospitals is provided in Appendix B, with a number, name, area and status. Appendix C lists SHA and PCT with the number of current classic community hospitals. Appendix D lists classic community hospitals by CHA code, ERIC code, name, area, PCT and SHA.

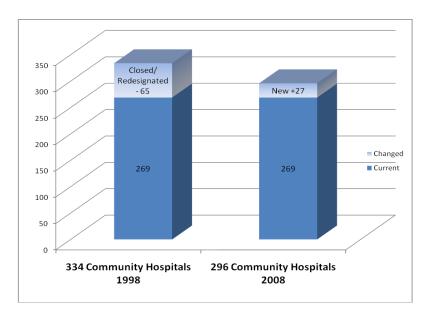

Appendix E lists those facilities that are classified as Community Care Resource Centres, Community Care Homes, and Intermediate Care/Rehabilitation Units by number, name, area, NHS organisation and SHA. The lists for each classification is divided into two parts – the first list is re-designated existing community hospitals (B,C,D), and the second list is an illustration of additional facilities meeting this classification (B+,C+,D+) This appendix also provides a list of excluded facilities by number, name, area, PCT and provides a reason for not including the facility.

Appendix F provides a list of community hospitals in development, which are beyond the scope of this data analysis and is provided for context only. This includes 54 facilities in 3 tables, illustrating developments funded by the Community Hospital Fund, LIFT schemes, and other developments.

Appendix G provides case studies and links to example community hospitals in each of the classifications and categories.

5. CLASSIC COMMUNITY HOSPITALS 1998 and 2008

This section of this study concentrates on community hospitals with beds from 1998 to date. We have tracked 361 named community hospital facilities, and identified those that continue to function, have been redeveloped, have been re-designated, have closed and are newly open. The analysis shows that there were 334 classic community hospitals in 1998, and now there are 296. This represents a loss of 38 classic community hospitals.

In 1998, there were 334 community hospitals. Since that date, 65 communities have experienced changes within their community hospitals, with 39 being closed and 26 being re-designated as either community resource centres (no beds), community care homes or intermediate care facilities. Within the ten year period 27 community hospitals have been opened, either as new builds or redesignations that are new or replacements. The graph shows that 269 community hospitals have remained constant, with a loss of 65 hospitals and an addition of 27 hospitals over the ten year period.

| Community Hospitals | Number |
|---------------------------------|--------|
| Community Hospitals (A) in 1998 | 334 |
| Closed | -39 |
| Re-designated (B,C,D) | -26 |
| Sub Total | 269 |
| Plus new | 27 |
| Community Hospitals (A) in 2008 | 296 |

65 community hospitals have been re-designated or closed, which represents 20% of the total number of community hospitals in 1998. Therefore 1 in 5 communities have experienced a loss or redesignation of their community hospital. 37 communities have lost their community hospital beds as their hospitals have either closed (21) or become resource centres without beds (16).

The changes in community hospitals are shown below.

| Community Hospitals 1998-2008 | Number | % |
|-------------------------------|--------|------|
| Existing – unchanged | 269 | 80% |
| Re-designated | 26 | 8% |
| Closed | 39 | 12% |
| Total | 334 | 100% |

The changes in community hospital type services by the 4 new classifications are 334 classic community hospitals to 322 community hospital type services. These figures relate to the 361 tracked community hospitals only, and do not include the many facilities that may be classified as B, C or D but were not previously community hospitals.

| Classification | Community Hospital Type Facility | 1998 | 2008 |
|----------------|----------------------------------|------|------|
| Α | Community Hospital | 334 | 296 |
| В | Community Resource Centre | 0 | 16 |
| С | Community Care Home | 0 | 7 |
| D | Intermediate Care | 0 | 3 |
| | Total | 334 | 322 |

Case studies and vignettes for community hospitals and community services are provided in Appendix G. These include classic community hospitals, re-designated community hospitals, excluded facilities and those in development. Below are examples of the 296 community hospitals divided into "current" and "new" classic community hospitals.

• Current Classic Community Hospitals (A)

The 269 community hospitals designated as "current" are those that are still recorded as being located in the same place with the same configuration of services to include inpatient beds. These hospitals may have undergone building improvements, extensions or redevelopments, but essentially they provide a continuing service to their community. None of these have been recorded as "new build" or replacements although some of them may well have undergone capital improvements. Examples of these include small hospitals such as Felixstowe, Suffolk and Memorial Care Centre in Rye, East Sussex. Larger classic community hospitals include remodelled DGHs such as Edgware Hospital, Barnet.

• New Classic Community Hospitals

| New Community Hospitals | Number | % |
|-------------------------|--------|------|
| New build | 13 | 48% |
| Re-modeled (i.e. DGH) | 14 | 52% |
| Total | 27 | 100% |

There are 27 new community hospitals recorded in total. 13 of these are the new buildings that have replaced one or more existing community hospitals. West Berkshire Hospital in Thatcham Berkshire replaced Newbury Hospital. West Mendip Hospital in Somerset replaced Butleigh Hospital and Wells Hospital. 13 new build community hospitals have replaced 18 community hospitals. Examples of these include the Samuel Johnson Hospital in Staffordshire that has replaced 3 community hospitals. 14 are hospitals have been now remodelled as community hospitals that were previously DGHs or other facilities. Examples of these are Queen Mary's Roehampton and Cirencester Hospital, Gloucestershire. Other examples are Leeds Road Hospital in Bradford and Longridge Hospital in Lancashire.

• Closed/Re-designated Community Hospitals

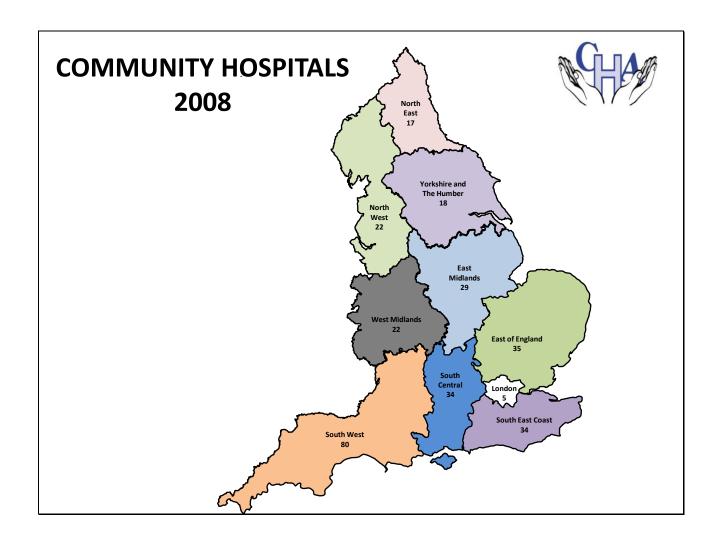

The closure and re-designation of classic community hospitals is detailed below.

| Community Hospitals – Closed / Re-designated 1998-2008 | No. |
|--|-----|
| Closed | 21 |
| Closed for Replacement | 18 |
| Change of function – B,C,D | 26 |
| Total | 65 |

21 hospitals have been permanently closed. If a community hospital is re-designated as a facility that is not related to community hospital type services (such as mental health unit) it is recorded for the purposes of this exercise as "closed" as a community hospital. Examples of closed community hospitals such as Bradford Upon Avon in Wiltshire, Goscote Hospital Walsall, and the Bartlett Hospital in Suffolk.

Distribution of Current Classic Community Hospitals by SHA (Category A)

The map shows the distribution of classic community hospitals. The number of community hospitals by SHA and PCT is listed in Appendix C.

The South West SHA has over a quarter of the 296 currently recorded classic community hospitals, with a recorded 80 community hospitals. Nearly half of the community hospitals in England (49%) are in the South of the country –namely the South West, South East and South Central SHAs. 6 out of 10 (61%) community hospitals in England are either in the South or East of England.

| Strategic Health Authority | Number of Community Hospitals (A) | % of National |
|----------------------------|---|---------------|
| South West SHA | 80 | 27% |
| East of England SHA | 35 | 12% |
| South Central SHA | 34 | 11% |
| South East Coast SHA | 34 | 11% |
| East Midlands SHA | 29 | 10% |
| North West SHA | 22 | 7% |
| West Midlands SHA | 22 | 7% |
| Yorkshire & The Humber SHA | 18 | 6% |
| North East SHA | 17 | 6% |
| London SHA | 5 | 2% |
| Total | 296 | 100% |

6. COMMUNITY HOSPITAL-TYPE SERVICES

The previous section identified a reduction in the number of classic community hospitals from 334 to 296 in ten years. This finding needs to be considered in the context of the number of existing and new classifications of community hospital type services such as community resource centres, community care homes and intermediate care/rehabilitation units. The finding also needs to be assessed in the context of the number of community hospitals in development.

Community Hospital-Type Facilities (B,C,D)

26 classic community hospitals have been re-designated to classifications B, C & D.

| Classification | Tracked CH |
|---------------------------|------------|
| Community Resource Centre | 16 |
| Community Care Home | 7 |
| Intermediate Care | 3 |
| Total | 26 |

16 community hospitals have lost their inpatient beds and now focus on ambulatory care services. These include Fairford Hospital, Gloucestershire and Doddington Hospital, Cambridgeshire.

7 community hospitals have been redeveloped as part of a care home complex, and are now registered with CSCI. An example of this is the Ledbury Health and Community Care Centre in Herefordshire which is a new building that integrates a GP surgery, care home and community hospital facilities. Other community hospitals redeveloped as care homes include Watlington in Oxfordshire and Hoylake Cottage Hospital in Merseyside.

3 community hospitals now style themselves as intermediate care or rehabilitation units and these are Shire Hill Hospital in Derbyshire, Lambeth Community Care Centre in London and Rutson Rehabilitation Unit in Northallerton.

• Extending the Classifications to Existing Facilities

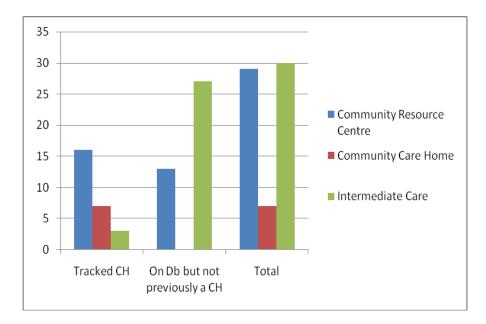

We have identified 26 community hospitals that may now be classified as Community Resource Centres, Community Care Homes or Intermediate Care facilities. In addition to known community hospitals, we have tested the classifications on an additional 50 facilities that have come to our attention during this study, 40 of which were on the database and 10 from additional searches.

| Code | Re-designated CH | Additional Facilities from Database | Facilities from Searches | Total |
|-------|------------------|--|-----------------------------|-------|
| В | 16 | 13 | | 29 |
| С | 7 | | 2 | 9 |
| D | 3 | 27 | 8 | 38 |
| Total | 26 | 40 | 10 | 76 |

We have applied the classifications to an illustrative list of 50 facilities that were not previously identified as classic community hospitals. These facilities are assessed to be community hospital-type services, and many have been identified as such by their NHS organisations, or in national programmes.

We have included a brief description of a selection of these, to illustrate how the classification may be applied to new developments and not just for existing and known community hospitals. The inclusion

of these services also helps to illustrate the increasing diversification of community hospital type services. A number of these facilities have been identified as "community hospitals" within national programmes. The graph shows the 66 facilities from the database.

Facilities that have been referred to as community hospital type services and may be categorised as Community Resource Centres (classification B) include Thetford Health Living Centre in Norfolk, Gravesham Community Hospital in Kent, Erith and District Hospital in Sidcup, Bunny Hill Primary Care Centre in Sunderland. These facilities may be extended primary care services or newly built centres that typically incorporate health promotion facilities such as wellness centres.

Facilities that are registered care homes but provide a range of community hospital –type services such as intermediate care, day care, clinics and health promotion include the Neighbourhood Resource Centres in Greenwich. These may be classified as C – Community Care Home.

Facilities that focus on intermediate care and rehabilitation (classification D) include Darley Court Intermediate Care Resource Centre in Bolton, Archway Intermediate Care Centre in York, Lings Bar in Nottingham and Rossall Rehabilitation Unit in Fleetwood.

Further examples of existing facilities that may be classified in this way are included in Appendix E. It is not possible within this study to identify every facility that may be classified as a community care resource centre, community care home or an intermediate care centre, as there are many facilities that would qualify across health and social services. This study has focused on tracking existing community hospital provision as a first stage of testing the four classifications. The additional facilities listed in the Appendix E shows how the classifications may be extended.

• Community Hospitals in Development

Community hospitals in development have not been included in the figures, as they have yet to open. This study has concentrated on tracking known community hospitals. However, in order to provide a fuller picture of the national context, it is possible to give an indication of those facilities that are in development. The source for this data includes the national programmes such as the Community Hospital Fund, NHSI, and National Working Group on design guidance for a new Health Building Note. This has been supplemented by internet searches and networking. These hospitals are a combination of new and replacement community hospitals covering all classifications. Where they are replacing an existing and current community hospital, this will already be counted in our data set.

New hospitals that are in development are not included in the figures, as these have yet to be fully open as community hospitals. A selection of new developments is provided in Appendix F, identified by their capital funding source.

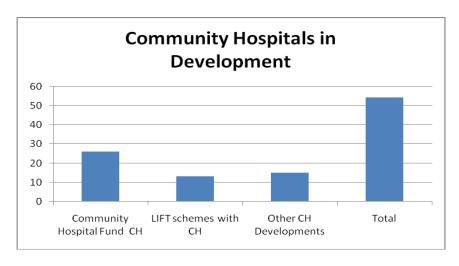

| Community Facilities in Development - Examples | Number |
|--|--------|
| Community Hospital Fund | 26 |
| LIFT | 13 |
| Others | 15 |
| Total | 54 |

26 hospitals are included in 23 funded schemes through the Community hospital fund, such as Minehead Community Hospital and New Horizons development in Somerset which integrates health care, sport and leisure, skills and enterprise and education.

Schemes funded through the LIFT programme include Frome Community Hospital in Somerset and Barton Community Health and Care Centre which replaces Barton cottage hospital and health centre with a new integrated centre which includes an extra care scheme for older people.

Examples of developments funded through other sources include the Malmesbury Care Campus, an intermediate and primary care facility, and the Chipping Norton development.

Other schemes identified at an early stage of development include the Reydon and Southwold Healthy Living Centre in Suffolk which will replace Southworld Hospital and GP surgery, Hartismere Hospital in Suffolk, South Petherton in Somerset and Devizes in Wiltshire.

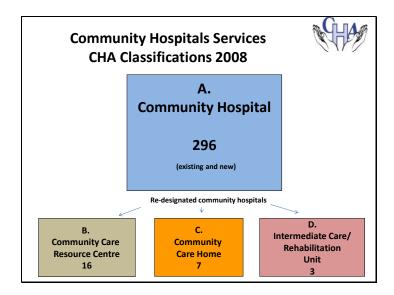

Excluded Facilities

There are a number of facilities that may appear to be styled or named as community hospitals, but have not met our criteria for inclusion in the list as either a "known" community hospital, or a community hospital type facility in accordance with our definitions. These are mainly facilities that are specialist rehabilitation services without the input of primary or community care, or specialist outreach acute hospital facilities. We have listed 20 of these facilities, including Cromer Community Hospital (specialist acute), Cossham Hospital (plans to develop as a community hospital in the future but was acute orthopaedic), and Ogden Court (a combined facility of sheltered housing and intermediate care) and Beighton Community Hospital in Sheffield. We note that some of these services are under review and therefore changes may be pending. These facilities are listed in Appendix E.

7. DISCUSSION OF FINDINGS

Applying Classifications to Known Community Hospitals

There are 296 classic community hospitals in England. 26 classic community hospitals have been reclassified as shown below.

The previous section has illustrated a further 50 facilities that may be designated as classification B, C & D. These were not exhaustive lists, but served to test the classifications and demonstrate the increasing diversity of community hospital type provision.

Emerging Characteristics

From the community hospital type services that have been assessed as part of this study on classifications, some of the emerging characteristics and differences have concerned the client group being catered for, the range of services, and the organisations involved. The lists below give a flavour of the services and facilities.

- A. Community Hospital
 - Local hospital with beds
 - Diagnostic & Treatment facilities
 - Rehabilitation & Intermediate Care
 - Palliative care
 - Unscheduled Care
 - Mental Health
 - Care Pathways
 - Facility for all ages
- B. Community Care Resource Centre
 - Ambulatory Care
 - Wellness & Health Promotion
 - Education

- Community facilities
- Facility for all ages

C. Community Care Home

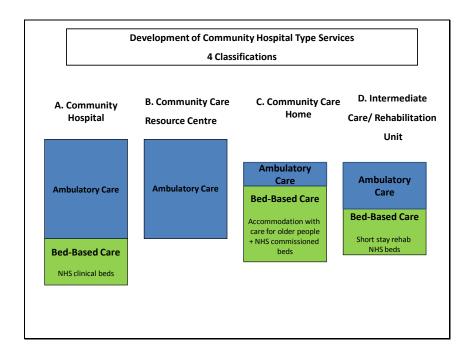

- Accommodation beds
- Short stay & Respite beds
- Intermediate care
- Day care
- NHS commissioned beds
- Predominantly older people

D. Intermediate Care/Rehabilitation Unit

- Beds step up & down
- Rehabilitation services
- Clinics i.e. Falls Clinic
- Day Care
- Predominantly older people

Variation on Services in the Classifications

We have tried to show diagrammatically the different emphases on ambulatory services and inpatient facilities across the four classifications.

Partnership Themes Across the Classifications

The classifications of community hospitals adopted had distinct management and operational differences with an emphasis on partnerships. Community hospitals, that is local hospitals with beds with primary care involvement are typically owned and managed within the NHS. Community Resource Centres, that is local healthcare facilities are typically developed with a public health agenda, and were owned and managed on a partnership model between the NHS, Local Authority and GPs. Additional partners have included housing associations and providers of sports facilities. Community Care Homes are more likely to be owned and managed by a private or voluntary agency and are therefore within the third sector. Intermediate care / rehabilitation units are most commonly

a joint venture between the NHS and Social Services. The increasing range of models of ownership across the statutory and third sector is explored in a publication on the CSIP website. ¹⁶

| REF | COMMUNITY HOSPITAL SERVICE | PARTNERSHIP THEMES |
|-----|---------------------------------------|-------------------------------------|
| А | Community Hospital | NHS |
| В | Community Care Resource Centre | NHS/Local Authority/GP/Third Sector |
| С | Community Care Home | Third Sector |
| D | Intermediate Care/Rehabilitation Unit | NHS & Social Services |
| | | |

Further Variations

The 4 classifications have been found to be adequate for classifying community hospital type services for this snap shot exercise for March 2008. However we are mindful of the wider variations in arrangements that may not have been fully captured in these 4 broad classifications. For instance, a number of PCTs are choosing to commission community or intermediate care beds in alternative facilities such as care homes or acute hospitals. This is a way of making community beds available without needing to develop or provide them in a traditional or redeveloped community hospital building. Another example is where community hospital facilities such as diagnostic and treatment facilities are provided in alternative facilities such as independent treatment centres. Therefore local community hospital type services may be available in a range of venues by a diversity of providers, according to local need and circumstance in flexible arrangements. This is an alternative to the integration and co-location of community hospital type services in one facility.

Diversification

There are increasing variations of community hospital type services, with regard to care pathways, client base, service configuration and partnerships. As the the policy of providing care closer to home is pursued, the diversification of community services is emerging according to local need and local circumstances. Where there is n existing community hospital, this can be the focus of integrated health and social care as well as primary, community and appropriate acute care, presenting an opportunity for the co-location of GP practices, inpatient facilities, care home beds, local hospital services and facilities for the whole community.

There are over 50 community hospital type facilities in development, planned as integrated multi-provider facilities with a diversity of partnerships with regard to their development, ownership, management and commissioning. By 2010, the configuration of local community services based around community hospitals should provide local people in many areas with an extended range of locally accessible services.

There is an increasing diversity of community hospitals. Whilst the study has shown how current community hospital type facilities may be classified, there will be a need to further test these classifications, and review them for their appropriateness as further facilities are developed in order to reflect the increasing diversification in the future.

This study focuses on community hospitals in the past (1998) and in the present (2008). The study has also identified future facilities that are in development, as well as facilities that may now be classified in this way. This provides a wider context to the study.

8. FUTURE PROFILING

Introduction

As community hospitals and community services are developing and increasing in diversity, there is a need to design a data capture system that will enable regular, routine recording in order to track these facilities. The first part of this study was to identify community hospitals and community hospital type facilities. This second part of the study is to provide suggestions on appropriate data recording.

Data Capture for Community Hospital Profiling

We have developed a format for developing a database on community hospitals within the Steering Group, and worked with PCT senior managers in order to develop and test these principles.

This work has involved profiling community hospitals by recording information such as ownership, management, services and providers. This process has helped to build a specification for regular and routine data capture that may be considered for future adoption. The data is concerned with the profile of services and facilities, and excludes data such as activity and costs. We have also concentrated on the buildings and the services within these buildings.

The CHA would recommend that the next stage, following on from this study, would be to further test the data and profiling tool within the Department of Health and with relevant stakeholders and agencies before taking to SHA Community Hospital Leads across England for further testing and development within SHAs and PCTs.

Objective

The objective for suggesting data capture requirements are understood to be to identify and classify community hospital services. Once this is developed, further applications may be to assess capacity and productivity, and to start the process for measuring outcomes and benefits.

Context

The Department of Health has requested some suggestions for identifying and tracking community hospital-type facilities in the future, taking account of the increasing diversification. The profiling exercise has helped to identify the key characteristics of the service, thereby leading to some suggestions for data recording for identification.

Community hospital services are predominantly multi-provider units that function as repositories for services provided by a number of organisations both within and outside of the NHS. As local community facilities they can offer a range of services involving many providers, commissioners and community organisations. The suggestions below have been designed to capture the full range of services and facilities offered to local communities. The data capture system has also been designed to help in the designation of community hospital services by 4 classifications used in this study. It is anticipated that further diversification of the models will arise as hybrid arrangements develop. However, these 4 classifications are considered appropriate for the current time.

Summary of Proposed Data Capture

| INFORMATION | DETAILS |
|-----------------------------|--|
| Identification | Name & Town - Address, telephone, email & web |
| Contact | Organisation Owning & Managing Facility Regulatory Authority |
| Pathway of Care | Intermediate care, palliative care etc Client group – whole community / older people etc. |
| Services | Clinics, beds, diagnostics, day surgery etc. |
| Facilities | Community teams base, Wellness centre, Cafe, Nursery etc |
| Providers | PCT, NHS Hospital Trust, Social Services, Voluntary agencies, private practitioners etc |
| Commissioners | PCT, Practice-based commissioners, Local Authority, private patients etc. |
| Associated Services on site | Care home, Day care, GP practice, Hospice etc. |
| Contracts | Leased space/ sessional rental/contracted services Direct provision or Hosted Service |

Data Capture Form

A form has been designed to capture high level profile information on community hospital services and covers the following sections:

- 1. Identification
- 2. Contact
- 3. Pathways of Care
- 4. Services
- 5. Facilities
- 6. Providers
- 7. Commissioners
- 8. Associated Services on the site
- 9. Contracts

The context and rationale for each section is given below. It is envisaged that a template form would be available electronically, and that completion of the form would be simplified through the use of options in drop down boxes wherever possible. Attention would need to be given to the feasibility of the form being downloaded, completed and then submitted electronically in preference to being completed online.

a) Identification

Community hospitals are typically known by the area in which they are located, as well as by their name. For instance, the Memorial Care Centre, Rye, or the Victoria Hospital, Emsworth. Therefore, it is helpful to have the location and name as the first items to record. This may then be followed by the full address and contact details. Each community hospital needs to be accorded a unique identifier. This method has been adopted for GP surgeries and other facilities, and simplifies identification. This is particularly relevant for example where hospitals have similar names or have changed their names. The study initially adopted the ERIC capital estates

number, which included a reference to the site as well as the PCT. This approach is appropriate for NHS facilities only, and does not offer a code for independent or partnership facilities.

There may also be confusion when there is a collection of sites and buildings for one hospital. For the purposes of this study the CHA devised a simple identification system based on the first two letters of the hospital, an abbreviation for the relevant SHA followed by a number. The system has the advantage of being readily identified and appropriate to all. It has been used as a working method for this study. Although the final decision on the unique identifier has yet to be made, the need for a unique identifier has been established within the DH Steering Group.

| Community Hospital | Details |
|--------------------|---------|
| Name | |
| Address | |
| | |
| Post code | |
| Tel No. | |
| Fax. No. | |
| Email | |
| Web | |
| Unique Number | |

b) Contact

The diversification of community hospitals means that the owners of the facility may range from a PCT, NHS Hospital Trust, LIFT Company, Social Enterprise, independent company or any combination. The managing organisation may not be the same as the owner of the facility. The majority are understood to be owned and managed by PCTs, but an allowance needs to be made for the increasing variations.

Identifying the regulatory authority is a helpful way of classifying each community hospital-type service. NHS community hospitals with beds will be regulated by the Healthcare Commission, as will independent local hospitals with beds. Intermediate care facilities or rehabilitation units will be either Healthcare Commission or CSCI, depending on the ownership and management, as these facilities are typically partnerships between health and social care. Community Care homes with commissioned NHS beds are predominantly regulated by CSCI. The form will need to identify the person completing the form, and to prompt an annual review to reflect the changes in services and facilities.

| Contact | Details |
|-------------------------|---------|
| Owner Organisation | |
| Managing Organisation | |
| Regulatory Authority | |
| Person Completing Form | |
| Designation | |
| Contact Details | |
| Date | |
| Date for Review 12 mths | |

c) Partners/ Associated Services

A number of community hospital services are developing with associated services and facilities on the site, and may be styled as a "Health Campus" or "Health Village." This may be particularly relevant where the hospital site has been redeveloped to enhance the sustainability of the overall facility. For instance, the newly developed Barton Hospital is owned by Shaw Homes and includes very sheltered housing.

| Partners / Associated Services on site | Details |
|--|---------|
| Care Home | |
| Day Care | |
| Sheltered Housing | |
| Diagnostic & Treatment Centre | |
| Hospice | |
| GP practice | |

d) Providers

The range of providers within any community hospital is extending as the market is opened up to alternative health and social care organisations. PCT providers typically provide beds, minor injuries services, community clinics and community teams. PCT arms-length provider services may be transformed into new organisations. NHS Hospital Trusts have traditionally provided outreach services such as specialist clinics, surgery and diagnostics. Other organisations may provide a range of ambulatory services such as day care and community facilities. GPs may choose to locate some of their primary health care services within a community hospital. Alternatively, some GPs may offer clinics as GPs with a special interest.

| Providers | Name |
|--------------------------|------|
| Primary Care Trust | |
| NHS Hospital Trust | |
| NHS Foundation Trust | |
| NHS Mental Health Trust | |
| Social Services | |
| Private Organisation | |
| Voluntary Agency | |
| Independent practitioner | |
| GP Practice | |
| other (please specify) | |

e) Commissioners

PCTs are the main commissioners for community-based services, working with GPs working in practice-based commissioning groups. NHS Hospital Trust may sub-contract services such as inpatient beds on a split tariff basis. The Local Authority Social Services may commission services such as day care. Patients may choose to pay for the service directly or in some cases through insurance cover.

| Commissioners | Name |
|--------------------------|------|
| Primary Care Trust | |
| Practice-B Commissioners | |
| NHS Hospital Trust | |
| Social Services | |
| Private | |
| other (please specify) | |

f) Funders

A characteristic of a community hospital is the high level of financial support from local residents, which may be organised through a Hospital League of Friends, individual donations, or through a new Community Interest Company acting as a Social Enterprise. In many cases, community funding has contributed substantially to new developments, building extensions, clinical equipment and upgrading facilities. This data is not currently collected, and yet is a significant factor in local facilities. As community hospital services diversify, their scope for attracting funding increases. For instance, there are examples of funds being attracted through the Rural Commission, Sports funds, and Housing Associations. Capital funds for building the new Pershore Hospital came from the Town Council. The Bunny Hill Resource Centre attracted funds from the Sports Council.

| Funders | Name |
|-------------------------------------|------|
| League of Friends | |
| Social Enterprise | |
| Patient donations | |
| Other voluntary groups (Rotary etc) | |
| other (please specify) | |

g) Services

Community hospitals typically offer a combination of inpatient and ambulatory care services. Many hospitals have a focus on intermediate care and rehabilitation. The identification of each of the services offered helps to classify the facility. A more detailed form is then completed for each service, showing the level of service (such as number of beds, number of clinic sessions per month), whether the service is commissioned from the organisation managing the community hospital or whether space is leased for the service, and the names of the provider and commissioning organisations.

| Services | Please tick |
|--|-------------|
| Inpatients (designation such as palliative care, maternity, intermediate care etc) | |
| Unscheduled care – MIU | |
| Clinics – specialist | |
| Clinics – community | |
| Rehabilitation | |
| Diagnostic services (e.g. X-ray) | |
| Day Surgery/ Treatment | |
| Day Care | |
| Maternity | |
| Children's Centre | |
| Walk-in-Centre | |
| other (please specify) | |

h) Facilities

Community hospitals have typically been the location for a variety of community facilities, particularly in rural situations where co-location is a particular advantage. Facilities for voluntary organisations may include rooms for self-help group meetings, classes and education sessions. Teams of staff may use the hospital as an administrative base, and this may include NHS/Social Services community teams, as well as volunteers such as for home support and meals on wheels. A number of hospital sites accommodate facilities such as a pharmacy, nursery and gym such as at Evesham. Identifying the whole spectrum of services and facilities helps to identify the full contribution that the community hospital makes to the community.

| Facilities | Please tick |
|-----------------------------|-------------|
| Base for Community Teams | |
| Base for voluntary agencies | |
| Host for GP out-of-hours | |
| Community café | |
| Training facilities | |
| Community rooms | |
| Patient resource centre | |
| Gym | |
| Nursery | |
| Pharmacy | |
| other (please specify) | |

i) Pathways of Care

Community hospitals have previously been described as a "bridge" between primary care and acute care, and considered to be an extension of primary care. As primary care expands, and acute care becomes more specialist, the role and function of community hospitals has become more defined in some cases. There are hospitals that offered a wide range of services to the whole community, and would tick each of the boxes for pathways of care. There are others that have focused their role into intermediate care. Others may function more as a satellite to an acute DGH, and therefore have a more acute or sub-acute focus. The identification of the pathways of care will help in the classification of community hospitals over time.

| Pathways of Care | Please tick |
|------------------------|-------------|
| Intermediate care | |
| Rehabilitation | |
| Palliative care | |
| Unscheduled care | |
| Acute care | |
| Surgical care | |
| Social Care | |
| Mental Health | |
| Health promotion | |
| Long term conditions | |
| other (please specify) | |

Summary on Data Capture

Community hospital services are typically small local facilities that have a complex range of contracts, providers, commissioners and hosting arrangements. The range of services and facilities, number of associated organisations, and complexity of contracts means that capturing the essence of each facility requires a sophisticated recording system. Currently much of the benefit of local service is not identified or measured, and therefore the full impact of these local facilities not appreciated. Given the policy commitment to extend capacity in local community health care facilities in order to support "care closer to home", it will be critical to be able to identify community hospitals, record their service configuration, appreciate their range of facilities, measure their activity and productivity, and start to assess the contribution to the health and wellbeing of the population served.

The scope of this part of the study has been restricted to data capture for the service configuration, and does not at this stage include service activity or cost.

This suggested high level data capture system has been based on learning from this study. This represents a first stage of a process which will require further refinement and alignment with existing systems. Further decisions will need to be made regarding the most appropriate means of capturing the data, which organisations record the activity, and how the data is converted to useable information across the statutory and third sectors. As community hospitals diversify further by expanding their services within and beyond traditional health and care services, the data capture will become even more of a challenge.

9. RECOMMENDATIONS

We recommend:

- 1. A process whereby the database and classifications can be further tested and validated, involving SHA Community Hospital Leads Managers.
- 2. Further development and testing of suggested data capture requirements for identifying and tracking community hospital services
- 3. An ongoing review of classifications to reflect dynamic situation.
- 4. A study of the changes in the services within community hospitals, and in particular the changes to inpatient facilities.
- 5. A dissemination process for this study to raise the profile of community hospital services, and illustrate the increasing diversification.

10. CONCLUSION

334 classic community hospitals were recorded in 1998 and in 1998 this is now 296. Over the ten years, 65 of these have changed. 39 community hospitals have closed, of which 18 have closed for redevelopment. 27 new or replacement community hospitals have been recorded, and there are further new developments pending. 26 of these have been developed as care homes, intermediate care services or resource centres without beds.

In addition to tracking and classifying known community hospitals from 1998, we have also listed 50 other facilities that may be classified in this way in order to test the classifications and to illustrate the diversification of community based primary and community care facilities. Very many more facilities are being created within communities, such as extended clinics, GP surgeries or care homes. Developments are being styled in a number of ways including as primary care centres, community care centres, health villages, integrated health and social care centres, and wellness centres. This is a dynamic situation, as new pathways, partnerships and services are being explored. We continue to assess the national situation through our networks and national sources.

We believe that the 4 dimension classification system is helpful in identifying the variation in community hospital type services for this snap shot exercise. It will need to be reviewed regularly and developed to reflect the extending range of service models. As the implementation of "Care Closer to Home" continues, we are witnessing increasing diversity in how capacity is created within primary, community and social care services, and where community hospitals have a role to play in providing a focus for integrated services. Studies on measuring capacity, performance and productivity are already part of the wider programme for Community Hospitals nationally.

We have been as rigorous as possible in undertaking this study but we recognise that there may be misinterpretations regarding community hospitals and their status. The responsibility rests with the Steering Group. We recognise the need for further validation and continuous updating, particularly in such a dynamic situation where the level of change is unprecedented in the 100 year history of community hospitals in England.

This study has focused on identifying and counting the classifications of community hospital type services, and has not undertaken an analysis of changes in service configuration within each hospital. From the CHA database we would anticipate that this would show significant changes, with an overall reduction in community hospital beds and increases in ambulatory care services. This research would show a fuller picture of the changes in community based services. We suggest an analysis of the changes to local community hospital services, and an ongoing review to reflect the dynamic situation.

We hope that this study is a helpful step in identifying the number and range of community hospital type services, and provides a basis for designing a system to capture this information regularly and routinely.

APPENDIX G CASE STUDIES

CASE STUDIES – TYPES OF COMMUNITY HOSPITALS AND COMMUNITY SERVICES

Further information and photographs of facilities are provided in an accompanying powerpoint presentation

A. Classic Community Hospital

Felixstowe Community Hospital, Suffolk (Classification A)

The hospital has recently been refurbished, to improve the quality of the environment and range of services and facilities. The hospital has 16 intermediate care beds, a minor injuries unit, diagnostic facilities, a range of clinics and a children's unit. The hospital offers intermediate care, palliative care, mental health services and other services. The hospital provides a base from community staff. The project was the first to be completed in the first wave of the allocation of the Community Hospital Fund.

Memorial Care Centre, Rye, East Sussex (Classification A)

The Memorial Care Centre which is owned by a local Registered Charity, Rye Health and Care Limited and replaced Rye & Winchelsea Hospital. The Care Centre provides 19 in-patient beds and a range of out-patient facilities and many other health and community care services. Facilities on site include sheltered housing, a GP surgery, social services and voluntary day centre neuro-rehabilitation services.

http://www.ryehospital.org.uk/

Queen Marys Roehampton, Wandsworth (Classification A)

Queen Mary's is a large community hospital housed in a state of the art, four-storey building. The hospital has 69 mental healthcare beds, 50 elderly and intermediate care beds and 20 rehabilitation beds. The facility provides outpatient rapid diagnostic and treatment facilities, mental health community services, a minor injuries unit, burns dressing clinic, limb fitting services, and a sexual health clinic,

http://www.wandsworth-pct.nhs.uk/about/gmh.asp

Edgware Community Hospital, Barnet (Classification A)

Edgware Hospital is a remodelled District General Hospital, and has been described as a template urban community hospital. Services and facilities are extensive, and include intermediate care & rehabilitation beds, mental health beds for older people, a birth centre, diagnostics, therapies and treatments, a minor Injuries & Walk-In Centre and day surgery. The hospital also offers a therapies centre, a day hospital and a dental service.

http://www.barnetpct.nhs.uk/sites_services/edgware/index.shtm

A+ New Community Hospitals

West Mendip Community Hospital Glastonbury, Somerset (Classification A)

West Mendip hospital opened in 2005 and combines the facilities formerly available at Butleigh and Wells Hospitals. The hospital is a purpose-built 36 bedded unit, comprising of 24 hour Minor Injury Unit, Outpatient Department, Day Surgery, X-Ray and Ultrasound, Physiotherapy, Podiatry, Audiology and Occupational Therapy departments. The hospital provides rehabilitation for acute and chronic conditions, palliative care and admission from District General Hospitals to complete the pathway to an acceptable discharge. The hospital also accommodates a training department.

http://www.somerset-health.org.uk/services/hospitals/mendip/westmendip.html

West Berkshire Hospital, Berkshire (Classification A)

The hospital replaced Newbury and Sandleford Hospitals. It offers 60 Inpatient beds medical patients, palliative care and rehabilitation. Services include a Day surgery unit, Outpatient specialist consultation unit, a dedicated Children's Outpatient facility, Physiotherapy and Occupational Therapy & Podiatry and X Ray. The hospital also has an award winning Patient Information Point which is staffed by volunteers.

http://www.berkshirewest-pct.nhs.uk/page.asp?fldArea=2&fldMenu=5&fldSubMenu=5&fldKey=649

Samuel Johnson Community Hospital, Staffordshire (Classification A)

The hospital replaces three hospitals in Lichfield: St Michael's Hospital, Victoria Hospital and Hammerwich Hospital. The new hospital has 52 beds, an integrated rehabilitation unit and a discharge liaison suite. The hospital offers renal dialysis and has a maternity unit. In addition to clinics and diagnostic services, it also provides a minor injuries service.

http://www.southstaffordshirepct.nhs.uk/services/hospitals.asp

B. Community Care Resource Centres

Westbury Community Hospital, Wiltshire (Classification B)

The Westbury Community Hospital offers clinics and day surgery. The previous inpatient facility has been closed. There are plans to dispose of the building and build The Westbury Primary Care Development (PCD) to provide accommodation GPs and primary care teams, and a docking station for a mobile diagnostics centre. Day surgery which is currently provided from the Westbury Community Hospital site is likely to be provided from a new Independent Sector Treatment Centre.

http://www.wiltshirepct.nhs.uk/newsroom/pressreleases/20080219westburypcdobcapproval.pdf

Fairford Hospital Community Resource, Gloucestershire (Classification B)

The hospital offers clinics, rehabilitation, therapies etc\and provides a base for community teams. The hospital previously offered inpatient beds and a minor injuries unit, but these have since closed.

http://www.glospct.nhs.uk/content/services/hospital fairford.html

B+ Additional Community Care Resource Centres (not previously Community Hospitals)

Thetford Healthy Living Centre, Norfolk (Classification B)

The new Thetford Community Healthy Living Centre opened in 2007, and includes a full range of community-based services and houses staff and services provided by Norfolk PCT, Suffolk PCT, West Suffolk Hospitals NHS Trust, Suffolk Mental Health Partnership NHS Trust, Amicus in Health and Norwich and Norfolk Voluntary Services among others. The facility replaced Thetford Cottage hospital. Services include X Ray, mental health services, GP practice. Rehabilitation, podiatry, and voluntary services.

http://www.norfolk-pct.nhs.uk/news/2006/dec/thetford291206.html

Bunny Hill Primary Care Centre, Sunderland (Classification B)

The Centre is a collaboration between GPs, the Local Authority and the NHS. Services include a primary care centre, leisure facilities, a library, cafe, housing office, sure start facilities, pharmacy and adult education.

http://www.sunderland.nhs.uk/tpct/global/docs/bunnyhill.pdf

C. Community Care Homes

Ledbury Community Health and Care Centre, Herefordshire (Classification C)

Ledbury Community Health and Care Centre is managed by Shaw Healthcare, and is a new development that replaced a cottage hospital and GP practice. The facility now offers an integrated service combining 36 nursing home beds, 24 NHS community beds, a GP practice, Outpatient Clinics, Dentist, Market Cafe etc.

http://www.shaw.co.uk/news/2816078_cha_award_2006.htm

Hoylake Cottage Hospital, Merseyside (Classification C)

The previous cottage hospital has now been developed as a care home, offering mental health, respite care, and intermediate care. The hospital also provides a day care service. The facility has been awarded 3 stars from the council. Voluntary groups also use the facility.

http://www.hoylakecottage.co.uk/aboutus.htm

C+ Community Care Homes (Not Previously Community Hospitals)

Greenwich Neighbourhood Resource Centres, London (Classification C)

Greenwich Council's Neighbourhood Resource Centres for Older People provide a range of residential, nursing, intermediate and day services on a single site. The three resource centres have received national recognition by winning the Public: Private Finance Award 2006 for best operational local government project.

http://www.greenwich.gov.uk/Greenwich/News/NewsArchive/2006/May/NeighbourhoodResourceCentresSuccessRewarded.htm

D. Intermediate care/Rehabilitation Unit

Rutson Rehabilitation Unit, Yorkshire (Classification D)

The Rutson is a rehabilitation hospital providing long term rehabilitation and palliative care for older people. In the 2006 Sentinel Audit, it was judged to be the best performing stroke unit in the country.

http://www.nyypct.nhs.uk/LocalHealthServices/

D+ Intermediate Care & Rehabilitation (Not Previously a Community Hospital)

Lings Bar, Nottinghamshire (Classification D)

Lings Bar provides rehabilitation services for older people. An investment in the facility has led to a reduction in the length of time patients remain in hospital and support for them in returning to their homes.

http://www.nottinghamshirecountyteachingpct.nhs.uk/content/showcontent.aspx?contentid=2470

Rossall, Bispham & Wesham Hospitals, Blackpool, Fylde & Wyre (Classification D)

Rossall Hospital Rehabilitation Unit is one of three purpose-built 40-bedded units that provide rehabilitation, recovery and continuing care services to older people from across the Fylde Coast. Costing £3 million each, the three units at Rossall, Bispham and Wesham were built as part of an ambitious and successful private funding initiative in 2000 and are almost identical in design. Rossall Hospital Rehabilitation Unit's friendly and homely environment aims to provide optimum surroundings for the rehabilitation and recuperation, continuing care or terminal care of its patients. The rehabilitation programme, which take into consideration the medical needs of individual patients so that they may continue to live independently or with supported independence within the community.

In Development

New Community Hospital Funded through the Community Hospital Fund

Minehead Community Hospital, Somerset (Classification – In Development through CHF)

The masterplan for New Horizons is a £50m project to provide West Somerset with a new Community Hospital, Skills and Enterprise Centre, Sports and Leisure Centre and replacement all-weather sports facilities. The project integrates learning, leisure, cultural, business and health facilities for the people of West Somerset, and is a partnership between West Somerset Council, Somerset County Council, Somerset Primary Care Trust and The West Somerset Community College.

http://www.westsomersetonline.gov.uk/media detail.asp?id=569&area=5

New Community Hospital Funded through LIFT

Frome Community Hospital Somerset (Classification - In Development through LIFT)

The new Frome Community Hospital includes 28 inpatient beds; including two clinical assessment and treatment beds; and a day bed for such treatments as blood transfusions and chemotherapy, not normally requiring an overnight stay. Services offered include enhanced rehabilitation services; enhanced facilities for local diagnostics and treatment including the provision of digital X-ray; and improved facilities to develop the minor injuries unit into a modern hub for unscheduled care. The new hospital includes a 12 bed satellite renal dialysis unit, and a modern 'birthing unit' with four maternity beds.

http://www.somersetpct.nhs.uk/services/hospitals/frome_community_hospital.asp

Barton Community Health and Care Centre, Staffordshire (Classification - In Development through LIFT)

Barton Community Health and Care Centre in Short Lane, Barton under Needwood, is a £7 million healthcare facility developed by South Staffordshire Primary Care Trust (PCT) and Shaw healthcare Ltd. The new centre replaces the Barton Cottage Hospital and the Barton Health Centre and has short stay inpatient beds for intermediate and palliative care and a unit for the younger physically disabled. Services include physiotherapy, podiatry and speech and language therapy. In addition is Barton Health Centre. Situated above the Health Centre on the 1st and 2nd floors is an Extra Care scheme, Barton Mews – 29 one and two bedroom apartments available for sale to people over 55 requiring some health and/or personal care in order to remain living independently.

http://www.southstaffordshirepct.nhs.uk/news/2007/151007.asp

Other Developments in the Pipeline

Malmesbury Hospital, Wiltshire (Classification - In Development)

In Wiltshire, the Malmesbury 'Care Campus' development is scheduled to be completed in the latter part of 2008. The development will provide a new 80-bed nursing and residential care home, which will also deliver intermediate care. There will be an 18 place day centre, and 28 close extra care apartments. The primary care centre will house a GP surgery, a pharmacy, a rehabilitation and outpatients' department as well as providing the base for a range of community healthcare workers. The facility is being developed and managed by the Order of St Johns Care Trust.

http://www.osjct.co.uk/resources/magazines/Annual%20Review%202007.pdf

Chipping Norton Hospital Oxfordshire (Classification- In Development)

The new scheme will comprise a 50 bed care home, replacing Castle View Care Home and will provide 14 specialist Intermediate care beds. In addition, a new, fit-for-purpose modern Primary Care Centre replacing Chipping Norton Memorial Hospital will be provided and operated by the PCT. This facility will contain consulting rooms, falls clinic, rehabilitative facilities and a maternity suite. The new Chipping Norton care home and Primary Care Centre is a partnership between The Order of St Johns Care Trust, Oxfordshire Primary Care Trust and Oxfordshire County Council.

http://www.osjct.co.uk/news.asp?id=170

Southwold Hospital and GP Practice, Suffolk (Classification - In Development)

Great Yarmouth and Waveney PCT, together with GPs and the community within a social enterprise, are planning to replace the community hospital and GP practice with a new healthy living centre. Services are likely to include a GPs' surgery, Community pharmacy, Dental surgery, District nursing base, Physiotherapy and Occupational therapy facilities, 16 acute NHS community beds, 30 bedded care home, and Social and welfare services.

http://www.southwoldsurgery.co.uk/healthylivingcentre/

Hartismere Hospital, Eye, Suffolk (Classification - In Development)

Suffolk PCT is preparing for the regeneration of the Hartismere hospital site. This regeneration will include the development of a new healthcare facility to provide GP services, complementary therapies, a birthing unit; mental health services; diagnostics; children's services; and space for clinical expansion.

http://www.suffolkpct.nhs.uk/News/Pressreleases/Latestpressreleases2008/Newgroupushersinhealthcareplans/tabid/1300/Default.aspx

South Petherton Somerset (Classification - In Development)

The new South Petherton Hospital will replace the old hospital and be located on the same site. The hospital will include inpatient beds for stroke and other neurological conditions; GP beds; a long term conditions centre, incorporating a day unit and community education facility; therapy services, providing integrated rehabilitation; specialist mobility services and outpatient services. Building on the South Petherton scheme will start in 2009. http://www.somerset.nhs.uk/news_info/whatsnew/whatsnew-detail.asp?id=1323

Devizes Primary Care Centre, Wiltshire (Classification- In Development)

The local GPs and Wiltshire Primary Care Trust are planning to build a new Primary Care Centre in Devizes. The Centre will house all of the three GP surgeries from the town (Lansdowne, St James and Southbroom surgeries) and provide space for some services for patients of the two out-of-town surgeries, Courtyard and Market Lavington. All the services which are currently provided at the Health Centre and the Community Hospital will transfer to the new Primary Care Centre so that all health services in the town will be in one location.

http://www.wiltshirepct.nhs.uk/

Excluded Hospitals

Cossham Hospital, Bristol (Classification- Excluded)

Cossham Hospital currently provides limited diagnostic and outpatient services as a satellite to acute hospital services. Plans have just been passed to redevelop the hospital as a Modern Community Hospital and offer: more clinics, a new minor injuries service, - X-Ray, ultrasound, MRI and CT scanning. Rehabilitation services will be offered including physiotherapy, speech and language therapy and audiology. The new development will include a new renal dialysis satellite unit and the first stand-alone, midwife-led birthing centre in South Gloucestershire and Bristol. Therefore the hospital will then meet the criteria to be reclassified as a classic community hospital.

http://www.bristolpct.nhs.uk/Communications/PressReleases/cossham%20hospital%20set%20for%20%C2%A319%20million%20refurbishment.pdf

Beighton Community Hospital, Sheffield (Classification - Excluded)

Beighton Community Hospital is a modern hospital providing a base for South East Child and Family Therapy Team and the city wide Dual Diagnosis Team. Other services at the community hospital include Sheffield Care Trust adult and elderly mental health teams and St Luke's Hospice. Although called a community hospital, the service is a specialist service offering mental health services.
